

## Why does science change?

July 2022

It is normal for science to change.  
It's not necessarily that scientists were wrong before - it's that they know more now. As scientists around the world conduct more research, more experiments, and make new observations, it is normal that their conclusions evolve too.

This is why it is always **important to check the date and source of information**, especially for something that changes as rapidly as COVID-19!
